it seems highly unlikely that you will need a secondary power supply for your card.

Besides, if you are that concerned about your hardware skills is it really worth making the saving on the card rather than paying someone else?

I have yet to come across a GPU a 10 year couldnt fit, especially since it it also highly doubtful you have more than one AGP slot on your system!!

Buy it, take the side off your case, plug it in, case back together, power on.

voila.

I also have a Ti4200. it kicks the crap out of the FX5200 for the same price.
