If you ask me isnt <?php and ?> the standered tags.
I dont know much about PHP will I am going to use it in the future.

EDIT: If I am mistaken don't you use the "echo" command when using HTML code in PHP code?

If so it would be this:

```
<?php
```

```
echo"<html>"  
  . "head>"  
  . "link rel=\"stylesheet\" href=\"css.css\" type=\"text/css\">"  
  . "/head>"  
  . "/html> "  
  . "";
```

```
?>
```

Sorry if I am wrong.
