MadTone
Maybe if we nag her some more she'll do it faster!

I'll take that as permission.
Muhahahaha

Permission of Doom!

Wouldn't it be a really simple script to check if WOL is up or not?

```
fsockopen(<WOL IP or equivalent>, , <timeout seconds>)
```

This could be put almost everywhere, but I'm guessing that's a bad idea seeing as an assload of web servers will be checking to see if WOL is on or not.

Then we will be doomed.
