hydra1945InfinintGlobal warming is happening.

No, it isn't. The very people who have been saying the world is heating up because of the actions of humans, the unabomber for one, thirty years ago said that the very actions of humans would have ushered in an ice age within a few thousand years; in other words, they were freaking out about global cooling.

Global warming isn't happening? The heat record in many places have been broken. UK, Canada...no doubt other places. It even affects Alaska.

No, there isn't going to be Global cooling either because the Earth has been coming out of an ice age for the last 10 thousand years.

Pollution from cars etc have not been the sole contributor to global warming, but they have contributed. And they do reduce air quality in the long run.

Quote:

God wasn't created because he is eternal, meaning he was, is and is to come. It's something our infinite mind can't fully understand.

I really want to know how you came to that conclusion.

I think the mind of a person is designed to accept religion.
