Slash0xl am running RenGuard with two programs, Firewall & Norton Anti-virus.

So far, I just had to allow the firewall to allow RG to connect to the internet, which I know is safe. And if RenGuard did have a trojan, Norton would of found it. Either way, it doesn't, it's safe, so get it...especially by June 1st. If not, Crimson will come by your house and blow up your computer.

And I'll be with her. \*loads rocket launcher and hands Crimson a ton of C4s"
