---

there is alot of mess in the regular renegade Always.Dat, all i need is the bare minimum, just to run the game to menu. We do need to have a TC because we are going to have SP along with MP. If i knew what i needed to have, just to load the menu, then thats great.

The reason i ask is because i would have to go through each file and see what is Renegade or what is RenAlert, and since thier always.dat is less than half the size of renegade, i thought it would be easier.
