IRON-FARTSir PhoenixxIt looks like they took the idea for tiberium from kryptonite... Both originated from meteorites, both are green, both are poisonous, both have several different variations... The only real difference is that tiberium can spread and grow.

EXdeath7I believe there was a flame tank in WW2 but it was never deployed.

It was used in WW2...

Tiberium seems more like a plant or weed.

And that's what I just said...
