Keep in mind bones.ini has a 3.0 ratio to neck hits, as opposed to 5.0 for the head and 1.0 for anywhere else in the body.

This means when a standard sniper rifle hits the neck, it does 3 times the normal damage. That's $100 * 3$, which is 300. Since \$1000 characters have 350 health in total, they can survive a neck shot.

I also find it easier to aim the ramjet, dunno why.
