very easy, just for a plain map just use renegadeEx, to open the mission files, and name your map the same as the mission map, replace the files with yours. Bam working SP map, as for scripts it can be done, thats not my area, someone else will post with that info.

Renegade did alot of sloppy work on their sp stuff, such as making bots spawn Right before you get around the corner and such.

Also if you want to look at the Sp maps in .lvl format they are on http://ftp.westwood.com
