- a) Make sure you've updated the definitions for each of those mentioned programs, before scanning.
  - b) Install a firewall.
  - c) Be careful what you install (check custom options in the installer, some of them can install sponser programs).
  - d) If using Kazaa, get Kazaa Lite.
  - e) If using MSN MessengerPlus reinstall it, without the sponsor program (custom option).
  - f) Download the google popup blocker (find it on google.com).
  - g) Perform a windows update, to cure any security issues windows may have.
  - h) Lastly, an obvious one, but be careful what e-mail attachments you open, if you've no idea who the sender is, delete it.
-
