Blazer[BA]toaster is not a RG server, despite whatever the MOTD might say.

If its nto a rengard server... then why the hell do u get the "youve just connected to a rencrap protected server" when u log into it? And why does ti boot people who do not have renguard on? The night in question people were getting kicked for NOT having renguard but this noob was still using final renagade.

This is the typical answer in these forums.. people will not take credit for screw ups. Renguard does not work correctly.. bottom line. Now weather it is a server issue.. or a renguard issue.. or a network issue.. bottom line is it doesnt work correctly 1/2 of the time. Furthermore because of this it gives players a FALSE sence of safty against cheaters..

I await the day it works right 100% of the time... or maybe I should be waiting for the day yall just give up?
