Any one know the way the ladder points are given after the end of a game? Is there a formula 4 it? How long can you be in a game, lose and still get 0 ladder points? I keep seeing players with less game points then someone else get more ladder points then them. prime exemple was the last game i played.

	kills.....	buldings.....	deaths.....	time....	game-pnts....	ladder-pnts
#1 me.....	6.....	0.....	2.....	7:06.....	1371.....	91
#2 him....	10.....	1.....	1.....	5:43.....	1708.....	84

my rank at the time was 500(somthing) his was 800(something). that game, he had everything better then me k/d, points earned, less time played, killed a bulding....

how/why in the hell did i get more ladder points then him?
