Is game programming differnt from programming??

And is 3d artist that diferent from graphic design...

Would you need different degrees for each one?

I need to know my report is due soon...

Yes to both. At least I think programming is different from game programming.

Game Programming is typically done with C++ which is programming. It is usually centered around DirectX & OpenGL specific programming, but is not limited to any "one type" or "special" programming.

3d artist is different from Graphic Design, a 3d artist is definately a different degree, as Graphic Design is done primarily in 2d Generally when working with a gaming company, the graphic designers are Texture Artists, Graphic Artists, Art Directors, etc... 3D artists are just that, they work 90% with 3d modeling, but do 2d art as well. most 3d Artists are Graphic Designers, but Graphic Designers are rarely 3d artists.
