Hi ive dl n installed BRenBot 1.35 and SSC 1.02 its the first time ive used nething like this after seeing it on a cppl of servers we dedided to give it a try. Im running it on a dedicated server ive got it working or so i think lo, some of the commands dont seem to work ie !Adminlist !Modules etc. Do i have to add modules into the prog seprately?. Ive set up admins of should i say mods so i know they are working as when they join is shows them as mods. Also the recodmendations thingy dont work ie most kills mvp etc etc. Just wondering if i need to do somthing else or add stuff to the prog sorry like i said im new to this n not very good with sorting this sort of stuff out lol more a happier just in game fragging pps n hate tech stuff 2 old to learn nwe things lol. Neway hope some1 can help

THX

Did you read my 'step by step' tutorial??

[http://zunnie.hellrazer.net/brenbot\\_tut.htm](http://zunnie.hellrazer.net/brenbot_tut.htm)

Its almost impossible that if you do exactly what it says in there that BRenBot isnt working in the end.

Anyways, if you continue to have troubles even after reading all that (REALLY READ!!) you can add me to your msn: SoQzunnie@hotmail.com
