Look... LOOK!!!

Why me?

I'll update the picture when i find the rest.

Yea there was an epedemic of that a while ago.

The new Renegade CD doesn't look like that anymore, so maybe it was just the older CD's?

Will the No-CD patch work on WOL/Gamespy and also Renguard?

If so where'd you get it?

EA is not likely to do much about it because Westwood doesn't exist and Westwood would be the one's who are legally responsible for damages of that nature. If they don't exist Because EA bought them, determined that they don't make money for EA, and then disband them, then in all crappy likely hood, EA won't care, because they can't be held responsible, and the company that could is buried with a tomb stone that says, "Murderd By EA 2002 AD for not making EA enough money."

Sad story, but true unfortunately, so that really makes the CD Bomb thinky all the more crappy.

Be glad you can't open your DVD drive though, because if you could open it and use it, and then

did use it, say good buy to \$50 or more, you would have to buy a new DVD drive. This way, with the door stuck, you can get it to a shop and ger it repaired.

Yo what disk is that

Mine sure don't look like that and mine are originals. Mine are green and gold.

For your information, i'm from the UK and....

CD1 is Green.
CD2 is Red (like the picture above).

im from the uk also and i have 1 red disc and 2 green....my other red disc cracked and gave way like that about 10 months ago so my brother bought another game....But i just use the green disc anyway to play and it works fine, although i believe our disk drive was unharmed, but my brother removed it, opened it up and removed the bits himself, it might be worth removing the cd drive opening it and turing it upside down like my brother did, just remeber what goes where when you take it out so you can put it back.

Although i actually think my green disk is now on the verge too, it has a huge crack down the centre and will more than likely throw me to desktop when i leave a server or lose connection to the net. (never trust a wireless network) :rolleyes:

cowmisfitIn the us, The data disk is orange and the game disk is green, but its like a lime green, not the dark green ya'll have.

What's the use of two "different" version of those disks, btw? Why didn't they make all discs the same colors across the world?

DJMI heard a big bang, i managed to force the DVD drive open and thats all i found, a computer bloke is coming out on tuesday to have a look if the DVD drive is okay, I daren't use it till then because all the little bit s are inside, that and the fact that I can't open the damn thing

I've had that to, Not with my renegade disc though. it happend with my copied version of red alert 2. I played it a while, and then I heard a strange sound comming out of my computer, and red alert 2 crashed to desktop. I kicked against my computer cause of the damn strange sound, then my whole computer crashed and I got a black screen. then I Un-plugged the power cable. A while

after that I've put my computer on again, and I open my cd played, and my red alert 2 cd was Nearly into two pieces

My Ren disks seem okay still, can't say that for RA2 disks though. One of my friends Soviet disk exploded in his CDRW and completely f*cked it. My Soviet Retaliation disk has a crack about 1 cm into it, and it don't work no more, which I'm annoyed about.

Do you notice a CD is less likely to crack if you have a personal case with plastic slots to fit it into?

Often, the original game CD case enclosure is such that it would end up cracking and breaking the CD after repeatedly putting the CD in and taking out. Renegade CDs also seem more prone to crack than others, even though this doesn't make sense. I've had to re-buy the game because both CDs cracked.

Also, to whoever has a small crack in their CD: Expect it to get bigger in the near future, and end up risking game crashes and soon after not working at all.
