Hello, i have renguard on my pc and want to disable it on the brenbot. I need this done cuz i dont want it.

And,

wot other bots are there, i know about dragonserv but this isnt public, also i know about blazeregulator. Are there any other or where to download dragonserv. and how hard would it be to program my own?

From your IRC channel you can type

```
!set renguard off
```

Also make sure in the renguard.cfg that you have settings like these

```
# renguard config file
```

```
# Pure Mode - Disallows any clients with model textures (skins) and alternative weapon models. 1  
= enable, 0 = disable.
```

```
Pure_Mode = 0
```

```
# Server Motd ID - your motd id, as assigned on the Server Motd Configuration on renguard.com  
(numeric)
```

```
# 0 if you do not have a motd.
```

```
motd = 0
```

```
# how to notify non renguard users. available options: msg , page, off
```

```
# page is WOL only. if you disable it, it will only do the kick message.
```

```
# be sure to put it into your motd then
```

```
notify = msg
```

For BlazeRegulator go to <http://www.blazeregulator.com>

DragonServ will never be available for public use and making your own bot is no simple task. It

requires a good knowledge of programming.

all i need to know for my perl script is how

to report all message chats  
&  
team chats to irc.

Any1 got the code for that lol.

decript renrem.exe

if you cant be bothered use fdstalk.dll

if you cant be bothered to do that then i guess your stuck with the -r="" parameter on renrem.exe

ah

there is a file in your fds directory called renlog\_(date here) take a look at it

dead6reall i need to know for my perl script is how

to report all message chats

&

team chats to irc.

Any1 got the code for that lol.

Why are you writing a perl script that does the same thing brenbot does (which is written in perl)

Cuz i dont want the perl commands. I just need a few simple commands like !msg !page !qkick and that. And reporting to irc. Not all the other commands that there are!
