What are you talking about... <http://www.blazeregulator.com> or <http://www.brenbot.com> Psst...
Brenbot is newer

With BRenBot you can turn off the modules you don't need... Restart is supposed to be added soon.

Actually newer doesn't really mean anything. From what I have seen the BETA of the SSC is

working fine, and should be released pretty soon.

Right, newer isn't necessarily better... but I have to say BRenBot is the best because my wonderful boyfriend created it.

Just like I would say BR .Net is the best because Dante made it.

they are good in there own ways.. they also suck in there own ways O_o
but i do prefer brenbot

I like Br.net myself, havnt gotten into BRenBot.

I just cant wait till Renguard is supported on Br.net.

I know Dante is working on the SSC, but I don't know if he or whoever he has working on BR.Net plans to integrate RG directly into BR.Net.

i dont care if i have to run a second program, but I cant get it to work at all.
it keeps looking for RenLog and it locks up br.net when running.

running the scc seperatly doesnt bother me.

The SSC will never be integrated directly into BR .Net, it will be a seperate application.

Upon final notes for this weekend, the RenEvo SSC will be released on monday "ish".

Check RenEvo.com for details.

Ok Blazer, riddle me this,
I once seen in a server many moons ago that was using BR (Blaze Regulator I assume...) and one of the commands they had was !ts. When some one said !ts, it stated the Team Speak IP address. I am under the assumption that this is a custom made command. Could I do this for my server? And if so, how?

Oh and P.S. Blazer,
BRenBot and BR.NET don't get along very well (BR.NET crashes when BRenBot is running).

[View Forum Message](#) <> [Reply to Message](#)

That was probably me testing TSR (TeamSpeak Regulator). Hopefully I will get off my ass this weekend and finish it up so I can release it.

P.S. Why would you run br.net AND BRenBot?

[View Forum Message](#) <> [Reply to Message](#)

It could easily be done by making a new command in commands.xml using BR .Net

[View Forum Message](#) <> [Reply to Message](#)

Oh, well thanks.

New question: I thought RenGuard was server-side only, why do people get kicked for not having RenGuard?

PerfectHsnipesimolt could easily be done by making a new command in commands.xml using BR .Net

Ok cool, but how do I do that for BRenBot?!

I will be adding a similar setup for custom commands to brenbot.
