First after I installed RenGuard 1.02, when I launched Renegade I got that common message "Game.exe has performed an illegal operation and has to be turned off" I clicked on "Don't send" and the error message disappeared together with the client-menu. I reinstalled Renegade and RenGuard but it was the same. I did what it said in that installation walkthrough.

Oh, I might say that when the error message I CAN click on Renegade and it launches but I dont know if RenGuard is activated. So... What the \*\*\* is the problem? Sometimes I get another error message where it says something like "Failed to get hash from [?]".

You have two options.

1. Sign up on [renguard.com](#) for the beta test so you can download 1.03 which will take care of your issue.
2. Wait a day or two for the official release of 1.03 which will take care of your issue

P.S. Nice avatar
