I need the level folder.. because I need maps to work with my mod.. When I select the mod when hosting no maps show up, so I need the level folder to put in the folder with the files for my mod, then extract the mod so it'll have those levels with it and working.

cheese... you couldve already made a test map real quick to test it probably... but anyways try this

---

if you havent...unmix the c&c\_city.mix using unmix or xxc mixer... then copy all the files(not the folder if there is one though) into your mods level folder... that seems like it should work...

---

But theres alot of people that already have this folder because of a small mod they've made with the working mod. Like blazer, buzz,and eqv. But they won't zip the folder and send it to me..
