Whether or not the knew it was Sarin does not matter, but where it came from does.

You know how fast this is gonna get buried under mountains of crap? Bet this doesn't even get the front page in tomorrow's paper.

You know it was there, I know it was there, anyone with a little common sense knows it was there, but idiots will still ignore the blatantly obvious, and the media will continue to feed them what they want to hear.

The media won't even report it except that it's the front story on FOX's website.

That roadside bomb with the traces of Sarin gas was so concentrated that it gave everyone near the area a slight headache. Supposedly it was made with a bunch of stale old ingredients, where

someone figured how to make the gas from other substances.

The fact that a year after Saddam was toppled, fundamentalists are detonating a bomb with traces of Saren gas doesn't constitute going to war with Iraq.

It was on CNN for about 10 minutes as a link on the home page.

No matter how much we find, it will never be enough for the libs.

Hey Crimson how about suppressing Super's sig and avi I am so tired of looking at his gay ass sig...

And now back on topic... The only people I heard report it was Fox News and they actually devoted a half and hour to it and the libs at CNN gave it a glance and said "this can't be empasized hide it."

SuperFlyingEngiThat roadside bomb with the traces of Sarin gas was so concentrated that it gave everyone near the area a slight headache.Would you have liked it if the agent was more potent and there were more serious casualties and maybe even a death? :rolleyes:

Quote:Supposedly it was made with a bunch of stale old ingredients, where someone figured how to make the gas from other substances.

The ingredients dated back to Saddam's regime.

Quote:The fact that a year after Saddam was toppled, fundamentalists are detonating a bomb with

traces of Saren gas doesn't constitute going to war with Iraq.Gee, where do you think they got the sarin from, huh?

It also turns out that some mustard gas was found a few weeks ago as well. Just where do you think they got that shit from, hmm?

I heard about it on MSNBC (Cable channel). They mentioned that a mortar shell containing Sarin was used as an IED has been confirmed. That was all they said until later in the afternoon when they had a former weapons inspector come on and say that "this was an isolated case and that there is nothing to worry about". <---- Those will be the famous last words.

I think we will be finding more of them now that they know what was in those shells. If that shell had been fired from its proper gun, the Sarin would have reached its proper mixture and been deadly. In order for it to mix properly it needed to be launched from its gun, not blown up like a hack bomb. So Superengi you don't know what you are talking about, do research before you spout off your fingure tips typing nonsense.

hydra: A year after Saddam's regime was toppled, a canister of Sarin gas could come from any neighbouring country.

K9: I'm interested as in how Sarin needs to be fired from a gun to mix itself properly. Could you clue me in, since you so obviously researched the topic?

hydra again: Iraq is not a walled off country now. A soda can's worth of nerve agent does not mean that it's obvious Saddam had WMD stockpiles. And a shell with traces of mustard gas could come from anywhere, as well. It would be a little more telling if these had been discovered maybe a year ago and in slightly larger quantities. It barely means anything now. If we had found a room underground stocked with many gallons of nerve agents and other WMDs, those probably would have come from Saddam's regime. But anyone can put a chemical in a soda can aand walk across a border.

Inside the shell are the two components that produce Sarin. When it is fired from a howetzer the

two start to mix. Then when the projectile explodes it vaporizes the liquid in to the gas stage. Read the fucking articles and learn. I was in the Army for 8 years and I am also a veteran of the first Persian Gulf War. Some of the first things you learned were the types of WMD's you may encounter and their ways of dispersion.

One of the main reasons only 12 Japanese subway goers died and not more is because they relied on natural evaporation to take effect.

A 155mm shell is larger than a "soda can"...try a keg.

Subject: Ladies and Gentlemen We Have Gas!

[View Forum Message](#) <> [Reply to Message](#)

155 mm is quite large. That is 15.5 cm wide, or about 6.33 inches. Larger than the 120mm shells fired from the largest main battle tanks, and larger than the standard 5" naval guns mounted on ships. And much larger than a soda can, which is usually around 4-5 inches in diameter. In other words, nothing to sneeze at. Especially when it only takes a very small amount of nerve agent to kill.

Quote:If we had found a room underground stocked with many gallons of nerve agents and other WMDs, those probably would have come from Saddam's regime.

See, this is an idiotic, yet common misconception. People expect to find clearly labelled bunkers full of WMD's all in one place. The US never did that(back before our chemical weapons program was dismantled), nor did the former USSR, so what makes you think Saddam would have been that stupid? You have a clear picture in your mind of what weapons of mass destruction "should" look like, but what you don't realize is that reality is rarely as simple. Have you ever considered the possibility that Saddam mixed in small quantities of chemical warfare shells with conventional arms? We might only find the occasional WMD with each stockpile uncovered. Does that mean they were not there? No, they just weren't there in obvious locations.

Obviously, they WERE there- this shell had Iraqi markings on it, not those of some other country, and the shell had obviously been in the country for some time(like, over a decade). Funny how when the evidence plants itself firmly in front of your face you still deny its existence.

[View Forum Message](#) <> [Reply to Message](#)

The shells were not labeled. Hence why Haans Blix and the other inspectors dont bother with them. They were dumb enough to look at the labeled ones, and left the unlabeled alone. Dumb dumb dumb dumb!

All the munitions weve found/took so far is giogn to take 10 years to explode. Thats a nice little fact for you.

Um, speaking as another veteran, and as someone who was around stockpiles of WMD's, yes we did. And so did the former Soviet Union.

WMD's have special lockers, bunkers, and storage facilities where eevrything IS carefully labelled, catalogued, and stored in hermetically controlled environments, and in the Navy they were gaurded by Marines with orders to kill.

And if you think we dismantled that program, you need to re-evaluate your media sources.

Uh, in america, yeah we would have those polices for protection of our people and the enviroment and to keep them from being used against us, but when it comes to saddam or terroist regems it is a diffrent story. They are not likely to have any where near the safty standers we have, so stockpile rooms are more likely to be used as a spoof when it comes to saddam or other terroist.

They know our safety laws and they would expect us to search secure facilities made with safety standards in mind, so that would be the last place Saddam or terrorist would store them. They don't care about their own people's safety and are gunning to kill us, so they are very unlikely to follow safety standards concerning WMD like we would.

DarkDemin: If you're gonna have a Bush/Cheney banner, I'm gonna have a Kerry banner. The End. BTW: Your sig and avvy are more "gay-ass" than mine.

Moving on...

Wee, we found a mortar shell with Sarin gas in it. This obviously proves Bush's case for Saddam having Weapons of Mass Destruction. But didn't Bush say that Iraq was an imminent threat to us? What was Saddam going to do, lob mortar rounds over the ocean with precision and hit Times Square? And, of course there are going to be mortar rounds with chemical agents in them, Saddam already dismantled more than 3,000 mortar shells [rough estimate] already in broad daylight under the UN, there's pretty much no way he could get all of them. Him posing a threat is being able to say:

Saddam: Get me a thousand chemical mortar rounds to fire at Israel

Arab: Ok

This is what would more likely happen in 2000:

Saddam: Get me a thousand chemical mortar rounds to fire at Israel

Arab: Uh, well, you see, we don't actually know where they are any more. We, uh, kind of dismantled most of them and now we just have some lying around in bunkers where it's anyone's guess.

And so we come in with our big bad army under the leadership of amateurs who don't even bother to secure all of Saddam's old armories, and so all the Arabs come and grab themselves some heavy ordnance. Who would have guessed? It's only what people do when radical government reform is taking place and there is very little real law. So now, all those old chemical shells are buried in people's yards, because people bury explosives they steal. So, for the next ten years, we're going to have people who forget about bombs in their yard and blow up chemicals when they drive over them with a riding mower. So we're going to keep finding these things for a while. In France, farmers are still blowing up from shells people buried on their land from WWII.

And someone can always bring a 6.3 diameter cylinder full of Sarin across the loosely guarded border.
