Hi,

I have searched but found nothing as of yet.

What is the address to access the renchat4 server to get the current player and clan rankings information? (I assume that it is renchat4 it might be one of the other ones though.

I have been looking around the different ren forums but I can't find a single thing.

Could someone either reply here or send me a PM with any places to look or the address.

Thanks

Tilly

Are you using mIRC or are you coding an app for this?

If your using mIRC, you have to make a socket connection to the renegade rankings website or the renevo ladder mirror to get the info. I already completed and released a working !wolstats script for mIRC using the RenEvo ladder mirror, no one ever asked me for a clan one.

Snipesimo

The question that I need most is what is the rankings website?

I know there used to be one where you could search for your name and then it would show you all your current stats.

Like :

Name

Kills

Deaths

Wins

Loses

Rank

I just need to know what the address is for this so that I can access this via an app. Not mIRC. Or does it just come from the main database?

Thanks

Tilly

If you want to get it directly from Westwood, its actually not on renchat4.

Direct WS link:
http://renchat2.westwood.com/renegade/game_results/blazer0x_individual_stats.html

RenEvo link (recommended):
<http://www.renevo.com/?section=services&servid=2&pname=blazer0x>

Thanks I know about that one.
The server I'm talking about is the server that has your current ranks.
Like the one shown in the renevo sigs
Like the one shown when u log into WOL and it tells you what your current rank is and your kills and deaths.

Thanks again Snipesimo

Tilly

Did you even click on the links? Or did I just read wrong, because I get the feeling your still asking a question but I could be wrong. Because both of those links have your rank and kills and everything. If you mean what blazbot does:

[%[EoE]snipesimo]: blazbot wol blazer0x
[%BlazBot]: WOL Rank: 20026 WOL Title: Private WOL Name: Blazer0x

[%BlazBot]: Wins: 24 Losses: 28 Ladder Points: 9,725

then you need to open a conn to WOL for that.

Yes that is what I am asking I already know about the info in the links that you sent me but thanks again.

Those links that you gave me is not the info that is in my renevo sig.

What I need is the info on how to access this info.

All this help is great mate thanks.

I don't want for you to think I'm stupid cos I'm not I think it was just we were talking about 2 different things.

Cheers

Tilly

I am yet to attempt to script this, but I will paste the PERL code Blazer uses to retrieve the info. If he doesn't want it posted, he can remove it.

```
[20:22] [Blazer]: wol rank is a bit more difficult
[20:22] [Blazer]: you have to POST info to their server, and parse the output
[20:22] [Blazer]: not just a get
[20:23] [Blazer]: my $req = HTTP::Request->new(POST =>
'http://renchat2.westwood.com/cgi-bin/renevo
[20:23] [Blazer]: ade/individual/carpenter');
[20:23] [Blazer]: @data = split(/\n\n\n\n\n\n\n/, $content);
[20:23] [Blazer]: $lines = (@data);
[20:23] [Blazer]: #print "Data contains $lines lines.\n";
[20:23] [Blazer]: for $line (@data) {
[20:23] [Blazer]: if ( $line =~ m/(\d+)\s\n(.+)\n\s(\w+)\n(\d+)\s\n(\d+)\s\n(\d+)\s\n([\d\,]+)/ )
[20:23] [Blazer]: {
[20:23] [Blazer]: $name=lc($3);
[20:23] [Blazer]: if ($name eq $user) {
[20:23] [Blazer]: # print "Found $3!\n";
[20:23] [Blazer]: $kernel->post($pci, 'privmsg', ReplyTo($env), "WOL Rank: $1 WOL Titl
```

```
[20:23] [Blazer]: e: $2 WOL Name: $3\n");  
[20:23] [Blazer]: $kernel->post($pci, 'privmsg', ReplyTo($env), "Wins: $4 Losses: $  
[20:23] [Blazer]: 5 Ladder Points: $6\n");  
[20:23] [Blazer]: return;
```

Thanks mate,
this was what I was looking for I think.
You are a god mate.

Thanks

Tilly

{edit}

Say I was writing a php script and I wanted to open the socket connection would I need to open it just to renchat2.westwood.com or the whole directory line or do u not know much about php?

If not anyone else know?

Thanks

Tilly

I know when I open a socket in mIRC I only open it to renchat2.westwood.com then you include the full link in the GET/POST

Yeah I know that line in mIRC.

Does anyone know the line php to do a similar thing?

Cheers

Tilly

I know this is an old post that I brought back but I have found what I was looking for. Now I'm using ASP and I have figured out what I need.

But now what I want to know is I can access the top 10 players (I know how to access the top 25 but I wont post that here) but how do you access the rest?

http://renchat2.westwood.com/renegade_embedded/individual/ranking.html

This is the link. What if I wanted to find other rankings?

Like 11-20 Or Maybe search by name

i.e. wnxtilly

I think Snipesimo might be able to help me

Thanks

Tilly

<http://www.renevo.com/?section=services&servid=2>

First 20 players.

<http://www.renevo.com/?section=services&servid=2&start=21>

start= the number rank you want the listing to start at, then the next 20 players after that number are also listed.

or

<http://www.renevo.com/?section=services&servid=2&pname=55>

pname= rank number you wish to look up. It will return the wolstats page for that player.
