I took some screenshots of my game today...
Because a retard Nod player was saying I am a cheater.
Where is the cheat ? LMAO, what a fucker. Sorry, I OWN !

And look at GEE-S kills... He was complaining about lag... Don't you think he cheats ? I do.

<http://www.cncreborn.de/renardin/images/cheater2.jpg>

I am writing one thing to you all : PLZ install Renguard. I use it every day and I have no problem of lag, I have a 200 ping on USA servers and I am in europe. Renguard don't make you lag so get it @ <http://www.renguard.com>

Why is there see-through walls? You can clearly see 2 characters through the wall there.. umm??

<http://matt.opticalgaming.com/images/lol-cheats.jpg> <<

:: edit ::

And no, i don't think he cheats. Look at how many players there are. There will be at least 20 of them running around as *normal* infantry, which = 1 hit kills. So, no.

Half of the body is in the ground it looks like, also look at the corner were i circled, looks kinda poorly photoshoped to me, and im not sure but isn't 19 REALLY low for FPS?? and i thought i rembered reading that extreamly low fps was a sign of cheats as well. This looks 99.9% sure there is some kind of wallhack on both of those screen shots.

LOL he want people to use RenGuard so why would he cheat? Also when Sakura dies she falls over and maybe look like she is in the ground. Also the walls sortof look like they are gone... but probably just because of lag, and no 19 isnt low fps.

19 isn't a low fps... How can you tell the screens are fucked up :S Seems a wild assumption 2 me... I dont see how the Sakura going down is relavent the target looks well within that guys range but you can say that he did kill a guy 3 seconds apart so that would indicate a wallhack on that guys part or a speedhack on the other one

That just looks like the person is falling backwards from dying. I play with 10-30 fps everyday, call that cheating if you will, but I call it a GeForce2

1st screen with the rave shaw looks lik a wall hack.. but the only wall hacks i have seen for this game REMOVE the terrain...

so he is not cheating unless you can show me otherwise...

now the second screenshot shows a sakura in death animation
if you look closely you will see the havoc next to him has just fired a shot hence the puff of orangy smoke

get a clue
shit

and 20 FPS for that amount of players in a server is practically normal not everyone has the 4GHz machine with an x800 XT with 3GB of RAM thats capable of running with 50+ on a 50 player server >_<
the thing thats shit is the KBPS... for 50 players.. pfft you should have around 250

Okay, now i take it back, that other one shows a dif angle it seems, at the angle it was at it did look as if it was through the wall.

and how is 19 not low?? I always thought that would be hell because i can't stand even playing at 20 while recording with fraps, mine is a good 60+ steady on my LCD screen and on my CRT is same, was higher but its going bad, Just bought new monitor, just gotta hook it up tommrow morning

Okay, I appoligize dude, sorry, That just really really looked like it at a glance, please forgive me for this fault in judgment, it was a simple mistake.

I used to get at best 20 FPS with my old rage 128 pro before I got my new ATI Radeon 9600 pro. Now I get about 60 fps constant. And I played like that from when the game came out in stores untill mid November 2003, I should get the medal of low FPS! LOL! That screen shot does look wierd though, the three Nod characters in that screen seem to small.

If you should get medal, then I should get medal too, because I played this game for like 2 years, and if I ever got 20 FPS, I would have to be a VERY lucky son of a bltch. My average FPS is, and almost allways was like 8 or less.
Anyway, what causes Lagg more?
1.Slow computer,

2.Sucki video card,
3.Low RAM, or
4.slow connection?
