I downloaded some w3d files for a few of my weapons but when I put all the files in it looks like this..

It comes with several screenshots that I put in the data folder also.. Can anyone tell me how to install them?

It looks like you put a little more than just w3d files in there.

Looks like you got textures for the HUD also. Poorly made ones, that is.

Link us to what you downloaded.

EDIT: nvm, I didn't see the second pic when I posted that.

Maybe...I'll have to test them out...

Which ones did you use?

There are more than one replacements for some weapons.

And this seeing through walls thing is happening every time you play?

I used 6,7,8

Yeah its all messed up. I don't know what I did wrong.

Sorry about that. I would have replies sooner, but I had to let my PC to cool down.

Anyway, I used skins 6,7 and 8, along with one or two others...

I couldn't duplicate the problem. What graphics card do you have?

Try removing all the files you put in your Data folder, and test the game out so we can be sure that it's the .w3d and textures causing the problems.

Awww.. That's gonna take some time. I think I'm gonna uninstall renegade because I have so many skins in there. Maybe I'll install Renguard too.

One question, Does it matter if I put in the TGA files the download came with or not?

EDIT: BTW I put them in the data folder also, I was just wondering if I needed to.

You know what, I bet its not working because of the new scripts I put in. I replaced the old ones with some other ones for the server side sniper mod. Do you think thats what caused it?

The TGA files are just the textures for the new weapons.

The scripts thing is much more likely the cause.
