1.) Download the mod from http://web.black-cell.net/server_side_ctf.zip
2.) Extract the zip, and edit the INI to your liking.
3.) Put it in your C:\Westwood\RenegadeFDS\Server\ directory
4.) If prompted to replace any files choose yes.

It should work correctly from there.

The ReadmeTo install this mod, extract all the files into your Server folder of your FDS. Configure CTF_Settings.ini to fit your needs, and then run your server. Please note that only the maps that are configured properly for CTF mode in CTF.dat will work. To add to this, only maps with the building controller "mp_GDI_Barracks", or only maps with the GDI Barracks on them, will work. All of the WS maps including C&C_Glacier_Flying are configured already for CTF mode to work. When you run your FDS, the first map will be gameovered. Please take this into consideration when setting up your map rotation. THIS MOD IS ONLY TO BE USED WITH THE FREE DEDICATED SERVER. USING THIS MOD WITH THE RETAIL VERSION OF RENEGADE CAN CAUSE THE GAME TO CRASH.
