Just a day ago I was playing Ren fine with version 1.037, didnt expect anything unusual. Then today for some reason, on the main menu it still reads 1.037 yet the multiplayer login menu reads WOLAPI V 1.20. Mismatch for basically everything. I didnt do anything to anything other than install rengaard a few days ago. Any way to fix this other than uninstall and reinstall internet componants?

Mine reads 1.20.1 ...but you can't join any games, right?

You could try re-applying the patch. If you used the standard download from Renegade, I don't know where it's saved.

<ftp://ftp.westwood.com/pub/renegade>

I tried the patch of the ftp and ran it. Nothing changed though, I'm coming to a point where ill just reinstall everything including internet components- me wants to play ren soon.
