SEAL12 instances of the word "skin" or "skins".

Why don't you go enlighten our dear friend Lion? I'm sure he'd LOVE to hear your skin/texture bullshit.

I'm sure Lion, a good friend of mine for many years, knows that's what it is called. He's just used to saying it that way and probably won't change.

Unlike you, he doesn't troll forums or be an ass.

Quote:Woke up at 7 AM. Cleaned off the back porch, rearranged the table and chairs, moved the plants around on the tile, and washed everything off again.

Went back inside, mopped the floor of the kitchen, washed dishes, took care of the puppies, and sat down to watch TV for a few minutes.

Walked up to the corner store for some breakfast consisting of three cheese danishes and a bottle of milk. Came back, drove to Food World in Niceville for soda, and frozen burritos (which I happen to love), then came back.

Tended to the garden by getting eaten up by mosquitos... After tying the tomato plants to stakes to keep them upright.

And here I am. Busy Saturday. Oh, and I finished some game development work(Found time to make 4 posts about its a texture not a skin) in the midst of all that.

Sleep soon, after Inuyasha comes on so she can ram this stick further up my ass.
Yup you are so kool!!!

[View Forum Message](#) <> [Reply to Message](#)

And true it is.

Here's some bedtime reading for you, Aircraftkiller:

<http://www.gamedev.net/dict/term.asp?TermID=410>

Quote:A texture that is used to wrap around an entire model. Normally skins are drawn on a single bitmap, and then the coordinates are mapped onto the vertices of the model.

<http://www.computeruser.com/resources/dictionary/definition.html?lookup=8411>

Quote:On the Internet, a skin is a graphic or audio file used to change the appearance of the user interface for a program or for a game character.Skins can usually be downloaded at no charge from sites that provide them.When using a skin, the appearance of the user interface changes, but not the functions available with the program.

http://www.geek.com/glossary/glossary_search.cgi?s

Quote:

Skin - A graphic or graphic scheme that is placed over a 2D or 3D object. For 3D games such as Quake, you can wrap a 2D graphic skin around your 3D character to change its appearance. Another skin example would be a Web browser that customizes the way it looks. Most programs that allow the use of skins have publicly available standards for creating new skins.

<http://www.pcwebopaedia.com/TERM/S/skin.html>

Quote:An element of a graphical user interface that can be changed to alter the look of the interface without affecting its functionality. Skins can give an interface an entirely different look than what it originally came with.

But of course, they are all idiots, right?

I believe this all just comes down to ACK trying to subjugate the world in his lust for power.

Originally, game developers who had no lives and worked in studios all day long used the phrase texture maps for their textures. Then, as modding became more popular and spread out to normal people who use computers, they gave texture maps the obvious title of "skin." Call them what you want, it's just your preference. But ACK wants everyone to call them a texture map to try and assert his power, while simultaneously using bigger words than many people who read internet forums can understand.
