I don't know if i should ask this here...

I just got a new graphics card, works fine, but the renegade (and renalert) mod tools still use the older graphics card. How can i let the public tools (LE) work on my new graphics card? I tried to re install it but it did not work.

Help?

Would it be possible for you to just remove the card? Or is it perhaps one of those integrated motherboard cards? If that's the case you may need to find out if theres a jumper on your motherboard to disable the card.

It's in my motherboard, and it is disabled, but i installed the tools when the old card was still used.

The new card is not part of the motherboard.

Like i sead, i already re installed it now that i have my new card, but it still usses the old thing.

It's only with the tools, games and stuff work fine with my new card.

Done, but after i click OK it crashes back to desk...

It does say it is used the new card... ill check the speed...

Edit: Still look like the old one, strange.
