I would like some feedback on the renegade server wrapper.

Are there any distributions where the latest version 0.3 doesn't run?

I am preparing a installer for the upcoming Core Patch 1 for Linux, that will auto detect the LFDS distribution, and also automatically install the server wrapper. Thus, I need to be sure it works on all possible platforms.

I run a renegade server on a Debian 2.4 server. The wrapper works ok
Now i'm trying to install the SSAOW patch, but it doesn't work yet...
I followed instructions on at this post:
<http://www.renegadeforums.com/viewtopic.php?t=8464>

The binary patch seems to work.
Maybe u have any suggestions?
