For a few days now i've been having trouble with my Renegade.

I've been instructed to just wait, and hope it blows over; i'm getting a bit impatient, though.

I've reinstalled the game twice, and no different.

Every time I get onto the Game Listing, which I do fine, the ping for every channel is 996/998.

I choose a game, and open the screen. It shows the people fine, and the Join button is highlighted... However, when I try to join, it just negotiate the port until it fails.

Please, help.

Maybe you could lower all your detail, sound and resolution etc. Don't know if it'll work but it might be worth a go

It might be a firewall causing that. You should turn it off if you have any and try again.

What is your internet connection speed at? It's probably your firewall, though.
