Something screwed up when I opened Renegade

It opens up and it goes to the left of the screen. where I can't reach it.

<http://img33.exs.cx/my.php?loc=img33&image=HELLP.jpg>

When I hit the windows key to get out of it it just minimizes so I can't look for it and drag it back over.. what should I do. :crazy:

Are you sure you arn't using drivers that can create multible "virtual" desktops? I think the nVidia stuff has that.

Yay, I fixed it!

If anybody else comes here asking for help with the same problem.. here is the solution.

You can try this Pulse and it will fix that.
