Does anyone have an ATHLON processor, and is it WORKING for you?

Just a hunch I had.

Home pc: P4 2.8GHz 512MB RDRAM PC800 XP Pro

Server PC's:

PC1 P4 2.8GHz 1GB DDR3200 W2K3

PC2 P4 2.8GHz 1GB DDR3200 W2K3

PC3 P4 2.8GHz 1GB DDR3200 W2K

On all of them the SSC just 'stops responding' when you hit the 'go online' button. Tried different ports and stuff but no worked

Hi DJ,

I have dual athlons and it is not working for me. Just stops responding like the others. I will email you more info I would rather not have public.

Thanks,

Ohno

Hmm, thanks for the responses guys, I thought it might be an athlon problem (as I don't have access to any for testing), but apparently it is affecting pentiums as well.

What has me scratching my head is that it's working flawlessly on some systems, and not at all on others.

Thanks for the input again, everyone's responses really help to solve this problem!

I just loaded the new Beta SSC up for the Toaster Oven and all of a sudden that session on the server is not there anymore. Now I have only one session and have no idea how to get the other one back. It may not of been the SSC but it happened right after i hit the connect button. I felt lag real bad and was kicked off the TS. When I tried to log back on teh box it only had one session. COuld the SSC do this?

And yes we are using an athlon
