"Now you start the RenGuard 1.03 installation. The RG1 install will automatically detect your Renegade game so basically all you have to do is click on "Next" , "Next" and "Finish" "

When I go to install renguard, my first screen has 3 options: "modify", "repair", and "remove". Modify is the default, I click "next" and a window pops up telling me that I cannot modify, so I click repair, again a window pops up telling me I cannot repair. I tried to re-install and the same thing happens again.

Any ideas?

Thanks

If you continue having problems I will give you the "safe installer" which is basically a zipfile that

you can unzip to your renegade directory and you will have RenGuard.

Uhm, did you try to use a newer installer while an older version of RenGuard was installed?

I'm trying to install the latest version. If you think the safe installer will work, I can try that. I just want to play a server with out those cheating bastards getting in the way.

the same thing is happening to me too and now i cant even play ranagade without it it gives me a mismatch error.

what should i do?

Did either of you install the 1.37 patch before installing/attempting to install RenGuard?

I'm going to say no since I do not remember doing that. Do I need to, and if so, where would I find it?

Quote:Then reinstall Renegade again and update the game to version 1.037 then copy your maps and sounds back to your Renegade\Data folder.

ONLY your maps and sounds, NOT any skins or cheats .

<ftp://ftp.westwood.com/pub/renegade/updates>

Well, I re-installed Renegade, downloaded the patch, then downloaded renguard, and I still cant get past that same spot when trying to run the setup. No ideas. Is there a contact for Renguard that I could try, maybe they can help me. I'm just sick of f*#&ing cheaters.

Thanks for all the help

You could open a support ticket at <http://mantis.n00bstories.com>.

Or, you could try to get live support from IRC at irc://irc.n00bstories.com/bhs_support.

Since this is the Official RenGuard Forum, you could probably get support from here as well.
