also, let me tell you for those that think gsa sucks:

- Ask yourself do you think having constant wol connection lost server restarts are worth it?
- Having cheaters that have been banned rejoin the server with new ip worth it? (cdkey banning v.s ip banning)
- 9 char limit... meh I think sucks but whatever... I love my =[UN]= tag.
- When was the last time GSA was down? In comparison to wol,.... wait there is no comparison.

The game started on GSA, the demo didn't have a wol mode, you guys played then and you can

play now...

with bhs enchancemetns (page function on gamespy e.t.c.) running on gsa is very attractive offer, not to mention linux can only support gamespy mode.

The choice is up to you, see a few dumb adds and play without interuptions or option B: get disconnected constantly.

hate to break it to you, but if you are running on wol those crackheads can still join the server with long names using renip or a batch file :rolleyes:

Also gamespy does not allow longnames (above 30 cahrs) and it does not allow spaces inside names.

These peopel are either using all seeing eye or ren ip. Stop blamming gamespy for a flaw in the renegade engine.

It's easy enough to re-install in GSA mode durring these times, but EA seems to care less about the games and more about the revenue.

AlkalineHaving cheaters that have been banned rejoin the server with new ip worth it? (cdkey banning v.s ip banning)

Thats not possible because we run RenGuard there will be NO cheaters.

And, in addition to that RenGuard supports Serial Banning so thats not an argument neither.

NaamloosA lot of people, like me, can't play on gay spy.

We get kicked the minute we join a game thanks to EA.

And this is another Reason GSA is actually aka GaySpyArcade.
People bought the game and they just cant play on GSA lol. How gay is that?
Suppose WOL is no more sometime soon these people cant play anymore at all.
Because the serials are not registered with GaySpy database.

Alkalinel love my =[UN]= tag

Sure a tag is nice. Its not the tag that causes problems.

Its a pain in my ass to kick these fuckers whenever they break the rules.
And in addition to this kicking these fuckers is ALWAYS a "quick kick" , they can rejoin the same minute as they were kicked. GAY!!!

And: The long names should be limited to for example 15 characters provided that they can be accessed on the keyboard without having to type special Alt+<number> codes.

When you connect with GAY!Spy your ping is boosted somehow. Normally my ping is like 100-200-ish but when i join with GAY!Spy its 4-500! LOL

And, the argument that servers dont crash on GAY!Spy is also not true. Since WOL is down the servers on GAY!Spy crash just as much as they would on WOL.

Because the serials are not registered with GaySpy database.

first I have heard of this, regardless, whats worse having a few people not being able to play or having NO-ONE being able to play because stupid ass wol is down?

stop making bullshit up, gamespy does not allow spaces nor does it allow the use of special characters :rolleyes: These people with special characters use renip/ase to connect :rolleyes: And guess what they can still join precious wol ONLY servers and thier is nohting you can do about it either.

btw last time I checked I checked KICK is supposed to mean you can rejoin immedialty, its wol's buggy system that makes you restart renegade before you can join.

In the end you end up on gamespy, if you hate it so much why the hell host a server on gamespy and why use wolspy for that matter? stick to wol only mode, or accpet gamespy is a better & more stable platform.
