i need maps for tib ev X9 very badly So far the only map i have that's worth a crap is tiberium swamp and i need more high quality mapsif you want your map in tiberian evolution then send the .lvl, .w3d, and any .tga textures that are part of the map. i will of course give full credit to anyone who submits a map that is used in tib ev. just make sure to provide me with your nickname.i have balduvard on the mod team making maps but i also want to get some existing popular maps into tib ev so that more people will try tib ev out. the commando version, i need all the textures(tga) . the .lvl file that the commando editor makes when u save the map(i need this to adjust for the war factory waypoints for the oversized vehicles) and the commando .w3d file that renx makes when u export the map. if u have any custom models/presets used in your map i need to know so i can get the map into tib ev faster
