How can I password protect a page on my site so you only need a password to enter it, not a username? Anyone know?

No user name, just password protected.

Well, does anyone know a simple way to do this like a java script or something?

Yeah, I host it myself. But a java script or something is better. Just something that doesn't need a user name and works for one page only.

Ok, heres a basic page for you, name it index.php

```
<?

//the password
$the_pass = "pass123";

if ($action == "login") {
    if ($_POST['pass'] == $the_pass) {

        //set them as logged in
        $_SESSION['pass'] = $the_pass;

    }else{

        echo "wrong password, please hit back";

    }

}else{

    //checks if you have typed in the pass
    if ($_SESSION['pass'] == $the_pass) {

        //your page content goes here
        echo "
        <html>
        <head>
        <title>my page - members section</title>
        </head>
        <body>
        welocme to members section
        </body>
        </html>
        ";

    }else{

        //login page goes here
        echo "
        <html>
        <head>
        <title>my page - login</title>
        </head>
```

```
<body>
<form action='index.php?action=login' method='post'>
Username:<br>
<input type='text' name='pass'>
<p></p>
<input type='submit' name='submit' value='Login'>
</form>
</body>
</html>
";
}
}
?>
```

I just wrote this from scratch just now, so they're might be errors, basicly this is just a quick script that checks if the pass session is registered and if it is, does the pass match the supplied pass.

If you want something more secure i suggest mySQL, sessions and MD5 encryption.

If you would like me to code you a proper login and user management system i have low prices.

Hope this helps

Can someone point me in the direction of some stuff I can put on it? I host it myself. Maybe like a chat applet and a guestbook. Thanks.
