Ok, thought I would try out the "new" stuff. It will not work and I get the same error each and everytime I tried. It says this when the "download.exe" is done being downloaded and I have clicked install.

"list out of bounds" (different numbers here each time)

at this point it quits.

Screenshot, and specs?

Got a firewall?

No firewall, I thought same thing and shut everything off...I get this same error here at work and on two system at home....all different. All systems running XP Pro.

I see no option here to attach an image of the error.

post it on a site and use the `[/img ]` commands to link the picture directly, you know, hotlink it.

I need to know the exact error.

Does it say "list index out of bounds" or "list capacity out of bounds" or list count out of bounds"?

---

Also looks like that 404 error in the Core Patch window can't be too good neither... (in Jarheads pic)
