i often recieve the meessage in the title while in a game and then am disconnected from the game and a message appears saying:

connection to server broken. please quit.

When this happens i am disconnected from the game i am and returned immediatly to the server list and can rejoin games. I am not disonnected form renegade or the internet.

I have dsl and connect through a lynksis router model NEFSR41

this problem has been going on for a while and is extremely irritation so ANY help would be aprreciated

Wow, someone else having the same problem!

I get this too. I have Cable 3MB down and 364 KB up. This happens EVERY game just about every 10-15 minutes.

I found entering at F8: client_physics_optimization 1

helps a little bit, but not much.

This is so frustrating.

You use a Linksys router from your first post? Have you tried yet plugging in directly? I have tried Renegade multiple reinstallations, with and without Renguard, with and without my Firewall and my AV disabled, with multiple AV programs (not simultaneously, but I used to have Norton, now I have Avast)...nothing changes.

It has occurred ever since the 1.0.37 patch was installed. Prior to that (I've played for a long time) I never had problems. I had actually stopped playing for quite some time due to this issue specifically.

Any help or suggestions appreciated.
