Well, usually, when my purchase terminals don't work, I die in the game or restart the computer, and then it's fine.
This time, however, they don't work since yesterday evening. I restarted, I died, and they still don't work :/. What should I do?

did you go into another server to check if it was just that server?

if not, there could be a possibility that someone is using the PT hack cheat on the server you was on.
