I would uninstall tools, gmax. And reinstall.Make sure you run gmax before installing the tools.

go on the menu to the right, open up objects>transitions, at the bottom should be ladder bottom and top. make sure the ladder bottom is low enough for your guy to grab on, and the top should be directly above it. They bothe should be sunken into your ladder that you made, at least half way. and the top should be above the ladder half way.
