brenbot.exe

POSIX object version 1.08 does not match bootstrap parameter 1.07 at D:/cpanrun/build/5-8-0/lib/XSLoader.pm line 106.

Compilation failed in require at C:/Perl/lib/POE/Kernel.pm line 11.

BEGIN failed--compilation aborted at C:/Perl/lib/POE/Kernel.pm line 11.

Compilation failed in require at (eval 13) line 1.

BEGIN failed--compilation aborted at (eval 13) line 1.

could not import qw(Kernel) at script/brenbot.pl line 6

BEGIN failed--compilation aborted at script/brenbot.pl line 6.

This is running on Windows 2003, Any ideas??

You seem to have some perl installation, that is conflicting with brenbot. Remove it, or make it invisible for brenbot.

Just wondering as interested myself, if its an enclosed .exe as opposed to a perl interpreted script, why does it matter if perl is installed? Or is it doing some external checks it feeds info from or something so it can run properly?

Its a compiled perl script. It usually takes all information out of itself, but when it finds some information via enviroment variables etc, it takes it from there.

Can't really change the behavior.. that is why I said, hide the other perl installation..
