when renguard automatically tries to download/install cp1 it scans all the maps, then says "there were errors" and then something like "please follow this link" and there is a link saying mp3dec. i tried following it but it comes up with the page cannot be displayed. i have tried installing cp1 with one of the dl links myself, but it says "not all files are there" and aborts the installation. what should i do?

I uploaded the file

http://www.blackhand-studios.org/cp/Mp3dec.zip

Download this, extract it to your ren dir, and restart renguard to restart the CP installation

i put it in data and renegade and it still has just the mp3dec link - it says this - "click on those download links, overwrite you corrupt maps, and when you are done restard renguard. still not fixed   i think i will try just downloading all the maps again, or copying them off the cd, actually i will just reinstall renegade
