One of my maps is pretty much done. It works fine when its named C&C but other people have to have it to play on it. So i take off the cnc and change the original ones name (if i were to delete it, it wouldnt work at all). Whenever i edit the scrvg_cnc to change it to go to M01.mix it always goes to the original one though instead of going to my edited version. Anyone know how to fix that?

You have to make sure you keep the original Mix fie in your data folder.
