A few days ago i got the message, "Dethmedan data hampering.....", in Renny game. (i believe it's the second time now)

The rg window showed also a message about disconnecting because of cheating.

I play a long time Renny now and use rg also from the beginning, and still can.

I don't use anything 2 have an advantage in game and nobody is accusing me of something, but i like 2 have a clear answer if someone ask me about it.

Can you help me ?

edit: I was advised 2 reinstall rg, wich i have done.

It's not a message from RenGuard.

This is the renegade engine detecting something wrong with the packets etc you are sending. Not sure, but I have seen this before.

Packets is the same as data ? (i'm not into the tech stuf as you can read)

I have also the map error thing, i believe it's called "corrupted map" or something. Same goes for the always.dbs. Read about it on the forum so i guess it's "normal".

Now i think i could be best reinstall Renegade itself, or could it have something to do with my conection ?

(Because it's not rg, maybe wrong section now. But now that we are here.....)

When RenGuard tells you about a corrupted file, you need to replace it in order to play

Turn those bigheads off and you'll be fine.

jk jk

I'd advise an uninstall and then reinstall of Renegade.

BTW Packets are how information is sent over the internet. Little packages called packets.
