Thanks to the people(hope more than one) who are giving their time for reading this!

I launched Renegade after a pause of 10 weeks.

So I was happy and looking forward to play it again, as you can imagine.

The problem: When I connected to my favourite server, a message occured out of the nowhere, it says that I will be kicked because of not using Renguard.

( it was a server found via "all seeing eye")

So I reinstalled Renegade, Patch 1.37 and Renguard 1.03.

And it still does not work.

Tried it on WOL also, but it seems to be down,finally!

Any idea? Maybe it is a registry thing,because I tested the CP1 Beta, but I don't know how to fix it.

Ps: The game works on "no Renguard servers", but to me, it is no fun.

Farewell and thanks for ANY help...

noodles

edit: now the server (and not only one) kicks me right after cheching the bandwidth....

Set your playername via F2 in The All Seeying Eye and it should work just fine!

Hi mac!

I set my WOL name to the "create name" list and: It works....., so thank you very much.

So, am I only able to play on ASE servers with my WOL nicks?

Tho' I shall begin again!

Farewell,

noodles

Ps: Nice to have people who keep this game alive! Excellent!!!
