Two Questions:

1) Is BRenBot the same as BlazeRegulator?
2) How can I hook BR up to my FDS? I can run the FDS but I cannot run BR with the FDS...

Any ideas? Both Q's...

1. they are not the same they do perform simular functions but they are diferent programs made by diferent ppl to allow you to kick, ban, view players, game info, restart, change map.... your FDS from mirc. there is one more program like this and it's called Night Regulator

2. try this guide by zunnie @ http://www.fanmaps.net/zunnie/brenbot/BRenBotTutorial.htm

That doesn't help, I found that BRenBot runs differently than BlazeRegulator. Can anyone help me connect it to my FDS?

easy, make sure the settings in server.ini of the fds match those of brenbot.cfg (as shown below).

server.ini - brenbot.cfg

RemoteAdminPassword=RenRemLinuxPassword
RemoteAdminIP=RenRemLinuxHost
RemoteAdminPort=RenRemLinuxPort

the password must be exactly 8 digits, the ip usually works with 127.0.0.1 and port can technically be anything but i find 5000 works.

oh, and make sure in server.ini that AllowRemoteAdmin=True
