Your computer crash in leveledit? Your preset database is corrupted. Replace it with a new one, but you'll have to add all your presets into it again.

I have the same problem. Sometimes when you try to save the presets the program crashes. Either make a new mod file, or go into the presets folder under your mod folder, and delete all the preset files. You'll have to create all the presets again though. I have no idea why this happens, if anyone knows, please tell me.

LOL, From what it sounded like...The level editor was missing everything. So I just figured he needed the link to the always.dat file. Like his registry got corrupted or something.
