I just got my new computer and it has wireless internet so we dont have to run wires through our walls.  The problem is that almost every 1-5 minutes i get a Connection to server interupted-Gameplay pending and then a immediate connection to server restored.  Can anyone tell me how to fix this?

I have wireless internet.
& Windows firewall.

I need immediate help as my clan really needs me to be there for them.

Your signal strength isnt strong enough,
Something else is whoring your bandwith,
Your wireless is setup inefficiently,
Your wireless is crap....
All of the above.

 :bigups:

It says that both adapters have good and very good signal strengths so that couldn'y possibly be the problem.  I was thinking it could be a setting or an interference.

BUT I JUST DONT KNOW.

Someone please try to help me with this problem.  i would appreciate this.

Which brand are you using? I'm using Linksys and there is no speed difference.  The only thing that sucks is that it likes to randomly lose connection a couple times a week.

Subject: ACTIONTEC and linsys

I am using ACTIONTEC which is our qwest providers modem in our downstairs.  There is a linksys network that apears with our ACTIONTEC connection.  Whats the differenece?  Should i be using linksys?  Our paper on how to set up the wireless network said i had to create a network which was the ACTIONTEC.  linksys was always there.  Should i use linksys?
