i have a .WAV file of the MC Hammer song "Cant Touch This", i'm wanting (as the subject implies) to make a new boink out of it. where i'm stuck is just seperating the part i want from the rest. if someone could help me with recording about 2 seconds of music from that song onto its own .WAV file. i would be very grateful.

I made this 2 years ago and still use it.

Boink

those are great but what i would like is to have somewhere close to seconds 11-13 from the song. it kinda gose like this... o o o cant touch this. this isnt just like a one time thing, i would like to know how to cut out bits of music or a monolog so i can keep customizing all the little sounds that renegade has. if its just too much of a task to put up on here, i understand. thanks for the other boinks they'll have to do for now. hey just a question is there some way to put a bunch of different boinks that will sound at random when you kill someone? say like... at the 10th or so kill some voice would come up saying something like " i'm just getting started" or something. and for the first kill "took you long enough", or something along those lines. again thanks for any and all help.

Look at <http://www.simplythebest.net> for free/shareware about mp3 to wav converters etc. then get Camtasia Studio 2 and start editing and cutting down sounds! Good luck.
