in my server (which is down rite now scince i am trying to fix some things) there are 2 problems

(A) Does not recognize renguard properly. Like when im on my server (i host it from my comp but i play on a dif comp)it says that almost every 1 doesnt have rg and that is very annoying

(B) The disable list not working properly(when i put all the disable list stuff on so that there rnt any vechs/basedef for inf only serv the base def and vechs both still work but the people get auto kicked for buying vechs hehehe sukers)

(A) RenGuard doesnt always find people on a LAN. If you are on a LAN, most likely it wont find you, only others outside the network.

for you guys who have lan and want rg to reconise you make a ssc_ignore.txt file in you brenbot folder and put you nick name's in it then reload br and there you go.

RenGuard *WILL NOT* work for you, if you connect to a LAN Server. If that is the case, use the ssc_ignore feature.
