Umm, If I

Remove Game.exe

Rename Game2.exe to Game.exe

and

Delete rengaurd.dll

Will that be fully Un-installed?

Because I dont wanna reinstall the Whole game--Then I gotta find the CD's

Cause I tried to launch from Game2.exe and it throws out a Big VERSION MISMATCH

Thanks for the help

Doing what you said will work and practically non-renguard renegade.

Only, Renguard has nothing to do with your Version Mismatch.

If you are doing this to get rid of the Mismatch, it will not work.

Regards,

Andy

Well, I did try that, Still a Version Mismatch.

But I beleive this only happens when I use GAYSPY to load it.

If I use the EXE or shortcut to the exe..All is well and im able to jon servers... I think I may need to install the whole game over again

I have no idea why, because gayspy loads it with the same exe file

I guess I cant take the easy way around this.... But thanks for the help anyways

EDIT: I fixed it, For further INFO for others who have this same problem..

I Replaced the Always.dat and Always.dbs files with the older versions, then Reinstalled the 1.037 patch, And everything works fine now :thumbsup:
